

My teaching philosophy properly entitled Lucienian Thought™ centers around 5 key elements. Those five key elements of Lucienian Thought™ are as follows:

- **Non-Linear Dynamic Thinking**
- **Interdisciplinary Studies**
- **Simplicity**
- **Efficiency**
- **Robustness**

The logic of Lucienian Thought™ derives from the fact that I have come to the realization that Sociology is not only in need of a new and innovative theoretical initiative but, a new way of empirically and scientifically analyzing the interconnectedness of the seemingly infinite amount of social systems that are all simultaneously in operation around the world. Moreover, Sociology is also in need of a new way of understanding the impact of the interactions that occurs between social systems on a non-linear dynamic basis. In addition, from my perspective Lucienian Thought™ will aid Social Scientist in understanding these social dynamics that not only spawns from these social systems but, it will offer an explanation into how and why the groups and societies that make up these social systems find themselves in the current state(s) that they are in.

Non-Linear Dynamic Thinking

In a complex world where non-linear complexity only becomes even more complex by the very evolutionary nature of all social systems, this phenomena of non-linearity and complexity occurs in order to fulfill the social systems need of survival. Lucienian Thought™ has been created because there is no Hard or Soft Science that completely explains the non-linear dynamics that takes place between and within groups of a society and the phenomena of complexities that are associated with such. So my teaching philosophy is to teach in a non-linear way that is in step with the non-linear complexities expressed by social systems.

Interdisciplinary Studies

The Philosophy of Lucienian Thought™ again is one that is built on my love, admiration and respect for the following academic disciplines: Mathematics, Physics, Sociology, Quantum Physics, Quantum Mechanics, Psychology, Biology and Cybernetics. These sciences when synthesized and fused together bring concreteness to the theories espoused from Lucienian Thought™. For we all know how free thinkers and scientist of all calibers seek to be able to implement findings into action anywhere on the planet thus, validating those findings and building on them to further refined them to suit their needs.

Simplicity

Any theory that is projected from Lucienian Thought™ must be simplistic so when conveyed anyone under sound mind and judgment can not only receive the knowledge but, they should be able to digest it and be they should also be able to utilize this knowledge in his or her own daily life at their level of cognition.

Efficiency

Building upon Simplicity, Lucienian Thought™ prides itself on being Efficient. This means minimum amount of study time, minimum amount of effort to understand and the minimum amount of energy expelled when its theories are deployed within context to a social operation.

Robustness

The application of Lucienian Thought™ should yield robust results and push the observer utilizing it to seek new and creative ways to solve problems. Its Robustness is solidified by the Hard Sciences that construct it. Because of its interdisciplinary background it stands strong when placed under pressure and scrutiny and endures when other sociological theories may possibly fail to explain complex dynamic social phenomena. The user of Lucienian Thought™ should be pushed to seek out new outcomes and probabilities in context to the social world. Lastly, the Robustness of Lucienian Thought™ should push the boundaries of logic and critical thinking of the observer utilizing it hence, enhancing the totality of the observer.

This is my teaching philosophy, this is Lucienian Thought™.
